GREENPOWER OF NORTH CAROLINA SOLAR OPTIONS: EASY AS 1, 2, 3...

At Green Power, we firmly believe that when it comes to solar energy, one size does not fit all—it's about finding what fits YOU best! Our mission is to tailor the perfect solar solution for your home or business. Understanding that not everyone requires a 10kw system, we analyze your current and projected energy usage to create a customized solar plan that meets YOUR Energy needs. Green Power of North Carolina offers a simplified solar purchasing experience with three straightforward options: **Good, Better, and Best.**"

****Option #1: Good**** Choose the straightforward purchase option and compare it to offers from other companies. Take advantage of the 30% Federal Credit. If you show us a competing bid with the same equipment, not only will we match their price, but we'll beat it. (Call for details) Return on Investment (ROI 8-11 years)

****Option #2: Better**** If you can't take advantage of the Federal Tax Credit, consider licensing the system through our "Purchasing Partner Program." This option is ideal for you as your system is owned by a third-party company or becomes part of a local community solar project and licensed to you for 5 years. The third-party handles ownership, operation, maintenance, and service of the entire system. At the end of 5 years, you can buy the system, continue licensing it, or have it removed. The Purchasing Partners retain all tax incentives, while you receive all dealer, supplier, utility, and manufacturer rebates the following year. This approach offers a quicker return than traditional purchases and provides all the benefits of solar power, while transferring the risk to others. Ask about your rebate potential. This option is well-suited for fixed income, retired, low-to-moderate income households, or anyone who prefers avoiding tax credit paperwork. Several with free battery options! (ROI 6-10 years)

****Option #3: Best**** The top-tier option is perfect for those looking to invest in solar through the Solar Marketing Partnership. Experience community solar at its finest! As a partner, you join an ownership group that retains all tax incentives. Your location benefits from solar power advantages and you receive federal tax benefits through the partnership for a demonstration solar project in your community over 5 years. This setup allows you to showcase the system, and at the end of the fifth year, you have the option to buy out the system. This option not only pays you to go solar but also allows you to invest in your community by helping others access solar while earning returns! (ROI 2-3 years)

What the other guys won't tell you. . . *If the federal credit is being taken under any model from any company, OWNERSHIP in the solar must be maintained for a period of 5 year or the prorated portion must be returned to the IRS. If you are planning on selling your home or business, then the partnership or Purchasing Partner Program is the better option as it can easily be transferred with no penalty.*

When you review our starter quote, one of the first things that stand out is our competitive price. You might wonder why Green Power NC offers a lower price per kW. The answer is simple: vendor relationships. As one of the leading solar installers in North Carolina, we leverage our strong relationships and extensive experience to pass savings directly to our customers. We maintain well-established partnerships with top solar panel manufacturers worldwide, ensuring we deliver on our promises and exceed expectations with superior products and top-notch customer service. Founded in 2007 and incorporated in 2009, and an A+ with the BBB. We don't brag about fake 5 star reviews, hold reviews hostage, or buy reviews with gift cards. We prefer you speak with your neighbors, and get an honest opinion.

At Green Power NC, we approach solar installations differently by focusing on maximizing value and delivering the fastest return on investment. Our team brings over 200 years of collective experience in Solar & Renewable Energy, Construction Management, electrical and Business Technology. With professionals including engineers, CPAs, and even a tax attorney, we ensure every aspect is handled with expertise, in the ever changing market place.

Yes, we are significantly more affordable than other quotes you've likely received from competitors. This cost-effectiveness stems from our unmatched experience, strong industry relationships, and deep solar expertise. Our dedication to excellence in solar installation and customer service has earned us the reputation of being North Carolina's premier solar installer.

Now before you decide which option will work best for you Go Ahead. . . Give us a Call and together we can help you choose what works best and create the perfect solar system for You!

GREEN POWER SOLAR MARKETING

New Approach...New Opportunity – Join a Solar Partnership:

In the solar industry, opportunity plays a crucial role. Green Power Solar Marketing has witnessed firsthand the barriers posed by high initial costs and the extended time it takes for consumers to realize returns on their solar investments. To address these challenges, we invite community members to join Green Power Solar Marketing as partners.

As a general or limited partner, you become a co-owner of solar systems within local communities, with Green Power Solar Marketing acting as the direct owner of these systems. Your investment grants you the opportunity to install new solar systems anywhere you choose, while our sales and marketing efforts license solar equipment to others, generating profits for the partnership.

Partners in the initiative benefit by assuming depreciation and contributing local/state incentives and grants towards the total project costs. You also receive the tax benefits, including the 30% or greater Federal credit (or the option to sell it on the open market). Our revenue streams include selling solar to third parties and direct ownership and operation of preferred sites.

Ownership sites

- ❖ Federal/ state Tax Credits
- ❖ Partner Investment tax benefits
- ❖ Sales Commission
- ❖ Licensing solar to the client
- ❖ Selling battery storage to Utilities
- ❖ Financing at fixed or variable rates.
- ❖ USDA/ private incentives

How does the Solar Partnership Help the Community?

The investors not only help homeowners get a faster return on their solar system, they want to give back and see solar grow in your neighborhood and community. To help expand and grow solar we offer \$1/watt solar systems to non-profits, municipalities, churches, schools, fire stations, and LMI housing in NC within our partnership.

Can you take a larger credit?

If you want to take a larger credit for a faster return, as it shaves years off your ROI versus the traditional solar purchase option. You can join as partner and own a “side gig,” that makes money and helps the community. As a Partner you will help educate and promote the company and demonstrate your project to friends and neighbors upon request. We will also have professional Images taken of your project to include drone videos and fly by to help promote the solar to your community. We also may do a site visits with other potential Green Power Solar Marketing partners or Green Power of North Carolina staff. Now don't worry any sites visits will be scheduled with you when it's convenient and well in advance. The marketing company will also provide a Green Power Solar marketing yard sign “Go Green Make Green” to be displayed discreetly in your front yard. It's small and professional looking that most HOA approve. The sign helps promote solar and lets everyone know you're a part of the Green Power Family and you are here to help.

No interest in becoming a Partner?

Through the Inflation Reduction Act you can just buy the Tax credits from us for the projects we have done in the local area. This can save you 10-15% on your federal taxes!

To get more information about becoming a Green Power Solar Marketing Partner and discuss your solar system investment, contact our marketing director at 252.353.5164 or email us info@GreenPowerSolar.marketing
